Nature 409:525-529(2001).
-!- FUNCTION: Probable transcription factor involved in the genetic control of flower development. Is required for normal development of petals and stamens in the wild-type flower. Forms an heterodimer with PISTILLATA, that is required for autorequiation of both Ap3 and PI genes. Ap3/PI heterodimer interacts with APBTALAI or SEPALLATA3 to form a ternary complex that could be responsible for the regulation of the genes involved in the flower
                                                                                                                                                                                                                                                                   STRAIN=cv. Columbia;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS1/gogdata/geneseg/genesegr-emb1/AA2001.DAT:*/SIDS1/gogdata/geneseg/genesegp-emb1/AA2002.DAT:*/SIDS1/gogdata/geneseg/genesegp-emb1/AA2003.DAT:*

```
The invention relates to a peptide conjugate having the formula:

(R-Xin-peptide where n = 1-10; X = C=0, when the R-X group is attached

to the N-terminus of the peptide, or a side chain of the peptide where

the functional group of the side chain is NH2 or OH; or X = O or NH,

when the R-X group is attached to the C-terminus of the peptide, or a

side chain of the peptide, where the side chain functional group is COOH

COONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

monosubstituted with a 1-5C straight or branched chain alkyl group,

phenyl optionally monosubstituted with a 1-5C straight or branched chain

alkyl group, or benzyl. The peptides ABB37001-B37058 represent analogues

of the peptide portion of the conjugate. The peptides represent analogues

of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of

the DH3 domain of the cell death agonist Bad. The peptide conjugate is

cuseful for modulating apoptosis in the cells of a subject, or for

reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of

subject affilicted with a cancer characterized by cancer cells that

cushiect affilicted with a cancer characterized by cancer cells that

custue or chronic lymphocytic and non-lymphocytic leukemia. The peptide

conjugate is also useful for treating disorders, acquired

increased apoptosis, e.g. neurodegenerative disorders, acquired

immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                  New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                      Claim 18; Page 19; 74pp; English

The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=O, when the R-X group is attached to the V-terminus of the peptide, or a side chain of the peptide where the lunctional group is tatached to the C-terminus of the peptide where the side chain of the peptide, or a side chain of the peptide, or a side chain functional group is attached to the C-terminus of the peptide, or a side chain functional group is attached to the C-terminus of the peptide, or a side chain functional group is COH CONHE; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally companies and the alikyl group, or benzyl. The peptides ABB37001-B37058 represent examples of the peptide portion of the conjugate. The peptides confuse confuse confuse confuse is a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of unction. In particular, the peptide conjugate is useful for treating a cubject afflicted with a cancer characterized by cancer cells that concerning an orest characterized by cancer cells that concerning allows, remalor thymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bol-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS;
                                                                            or for inhibiting
                                                                                             cell lymphoma/leukemia 2 (BC1-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ΠD
                                                                                                                                                                                                                                              The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached

to the N-terminus of the peptide, or a side chain of the peptide where

the functional group of the side chain is NH2 or X = O or NH,

when the R-X group is attached to the C-terminus of the peptide, or a

side chain of the peptide, where the side chain functional group is

con CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

or two double bonds, cycloburyl, cyclopentyl, cyclohexyl optionally

monosubstituted with a 1-5C straight or branched chain alkyl group,

phenyl optionally monosubstituted with a 1-5C straight or branched chain

alkyl group, or benzyl. The peptides AbB37001-B3708 represent examples

of the peptide portion of the conjugate. The peptides represent analogues

of the BB1-2 superfamily polypeptide corresponding to amino acids 72-97 of

the BH3 domain of the cell death agonist Bad. The peptide conjugate is

cuseful for modulating apoptosis in the cells of a subject, or for

reversing B cell lymphoma/leukemia 2 (Bc1-2)-mediated blockage of

apoptosis in cancer cells. It is also useful for inhibiting Bc1-2

cuboct afflicted with a cancer characterized by cancer cells that

express Bc1-2. The cancer includes prostate, colorectal, gastric,

consider a simple or thyroid cancers, neuroblastoma, melanoma, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS;

The invention relates to a peptide conjugate having the formula:

(R-X)1-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the side chain of the peptide where the side chain of the peptide, or a side chain of the peptide, where the side chain functional group is conside chain of the peptide, where the side chain functional group is COOH or CONH3; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or CONH3; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ARB3701-B37058 represent examples of the peptide portion of the conjugate. The peptides represent analogues of the BH3 domain of the conjugate. The peptides represent analogues of the BH3 domain of the conjugate. The peptides conjugate is useful for modulating apoptosis in the cells of a subject, or for eversing B cell lymphoma/leukemia 2 (BCI-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting BcI-2 function. In particular, the peptide conjugate is useful for treating a conjugate is that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         express Bcl-2. The cancer includes prostate, colorectal, gastric, non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic_leukemia; neurodegenerative disorder; AIDS;
                                                                                                                                                                                                                                                                                                                                             New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0

                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is MH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or two double bonds, cyclobutyl, cyclopentyl, cyclopentyl optionally one or two double bonds, cyclobutyl, cyclopentyl, cyclohearyl optionally consubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AAB37001-B37058 represent examples of the peptide portion of the conjugate. The peptide conjugate is alkyl group, or benzyl. The peptides AAB37001-B37058 represent analoques of the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl-2) andiated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bol-2 function. In particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         express Bc1-2. The cancer includes prostate, colorectal, gastric, non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by

The present invention describes an isolated or synthetic polypeptide

(1) comprising a less than full length amino acid sequence of a mutant

Bcl-XL/Bcl-2 associated cell death regulator polypeptide (BAD) or its

fragment, which contains amino acid substitutions at Serl18 of a human

fragment, which contains amino acid substitutions at Serl18 of a human

EAD, Ser155 of a mutine BAD). (1) has immunostimulant, neuroprotective,

nootropic, antischaemic, vulnerary, cytostatic, antiviral,

antiarthritic, antiniflammatory and immunosuppressive activities, and

can be used as an apoptosis indover or inhibitor. BAD polypeptides and

polynucleotides can be used for screening candidate compounds and drugs

for activity that promote cell survival or apoptosis. Other uses include

inducing or inhibiting apoptosis in a cell. Candidate compounds

identified and (mutant) BAD polypeptides are useful in treating

immunodeficiency diseases, neurodegenerative diseases, ischeemic cell

death, reperfusion cell death, wound healing, cancer, viral infections,

autoimmune diseases. The present sequence represents a specifically

claimed shorter murine BAD mutant amino acid sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Epitope; murine; bcl-x(L)/bcl-2 associated death promoter; Bad; stroke; polypeptide; bcl-x; cell death; regulate; BH1; BH2; apoptotic cell death; cytokine deprivation; IL-3 dependent cell line; immunodeficiency; AIDS;

  This sequence represents the murine bcl-x(L)/bcl-2 associated death promoter (Bad) gene. Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and requiates cell death. It has homology to the bcl-2-related family clustered in the BHI and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L) to form heterodimers. Such agents may be used to identify agents which inhibit its used to treat neurodegenerative diseases, immunodeficiency diseases,

The present invention describes mutant BAD (BCL-XI/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 aa sequence. The position 112 and/or 136, relative to the murine BAD 204 aa sequence. The present sequence is the murine BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, interangenic animals for use as disease models or in drug screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, determined by measuring relative amounts of phosphorylated and non-phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated cannot in the specified Ser, forming a product that does not beterodimerise with BCL-2 or BCL-XL but inscead binds to 14-3-3 family contents in the cytosol, thus promoting cell survival. The mutants with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Murine, mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.

                                                                                                                                                                                                                                                                                                                                                                         The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the mutine BAD 204 as sequence. The presents aguence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein. Also described are: (1) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, inflammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated and non-phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                            New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        96.5%; Score 138; DB 19; Length 204; 100.0%; Pred. The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at cath regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 aa sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, or prevent diseases associated with reduced apoptosis, e.g. cancer, or prevent diseases associated with reduced apoptosis, e.g. cancer, or inflammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD corteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is caping or ischaemic cell death. The apoptotic status of cells is greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not phosphorylated with BCL-2 or BCL-XI but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with two services are substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein;

  dath regulator) proteins, having a mino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein. BAD proteins are used to treat increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, inflammation and autoimmune disease. Polynuclectide sequences encoding mutant BAD proteins as disease. Polynuclectide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphatates. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphated and non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with Ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BAD protein; Bcl-XL/Bcl-2 associated cell death regulator; 14-3-3; serine phosphorylation; post-translational modification; apoptosis; signal transduction regulator; phosphoserine phosphatase; senescence; immunodeficiency disease; neurodegenerative disease; infertility; cancer, viral infection; lymphoproliferative condition; arthritis; inflammation; autoimmune diseases.

```
This sequence represents a novel serine-phosphorylated protein, BAD

(Bcl-XI/Bcl-2 associated cell death regulator). The serine residue is
phosporylated in a post-translational modification and allows binding
to the 14-3-3 protein which is a signal transduction regulator.

Modulators of phosphorylated BAD, which act through inhibition/activation
of a phosphoserine phosphatase, are useful for preventing/treating
increased/decreased apoptosis in a cell. The increased apoptosis may
result from immunodeficiency diseases, senescence, neurodegenerative
disease, ischaemic cell death, reperfusion cell death, infertility and
wound-healing. Decreased apoptosis may result from cancer, viral
infection, lymphoprolificative conditions, arthritis, infertility,
inflammation and autoimmune diseases. Measuring the amount of
this mannament of autoimmune diseases. Measuring the amount of
BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bcl-XL/Bcl-2 associated cell death regulator; BAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antilischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease, neurodegenerative disease; viral infection; ischaemic cell death; reperfusion cell death; arthritis, infertility; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                쉽
                                                                                                                                                                                                                            The present invention describes an isolated or synthetic polypeptide

(I) comprising a less than full length amino acid sequence of a mutant

BC1-XL/BC1-2 associated cell death regulator polypeptide (BAD) or its

fragment, which contains amino acid substitutions at Serl18 of a human

C fragment, which contains amino acid substitutions at Serl18 of a mutine

BAD, Ser155 of a mutine BAD). (I) has immunostimulant, neuroprotective,

CC BAD (shorter murine BAD). (I) has immunostimulant, neuroprotective,

CC antiarthritic, antiinflammatory and immunosuppressive activities, and

CC can be used as an apoptosis inducer or inhibitor. BAD polypeptides and

CC polynucleotides can be used for screening candidate compounds and drugs

CC polynucleotides can be used for screening candidate compounds and drugs

CC polynucleotides can be used for screening candidate compounds

inducing or inhibiting apoptosis in a cell. Candidate compounds

cidentified and (mutant) BAD polypeptides are useful in treating

immunodeficiency diseases, neurodegenerative diseases, ischemic cell

cdeath, reperfusion cell death, wound healing, cancer, viral infections,

lymphoproliferative conditions, arthritis, infertility inflammation and

cutoimmune diseases. The present sequence represents a specifically

condimination and sequence represents a specifically

The present invention describes a method (MI) for inducing apoptosis in a cell infected with herpes simplex virus (HSV), which comprises administering to the cell, a composition having an agent that inhibits phosphorylation of pro-apoptotic polypeptide BAD by HSV US3. Also described is a method (M2) for treating a patient infected with HSV, by administering to the patient, a composition comprising a peptide comprising a sequence of 4-100 continuous amino acids of a 168 residue amino acid sequence (see ABR39081), where the peptide comprises seril2, setil5, or seril5, or their combinations. BAD has viruoide activity. MI is useful for inducing apoptosis in a cell infected with HSV, where the cell is in a human. M2 is useful for treating a patient infected with HSV. The present sequence represents murine BAD, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse; Bad-DTTR; apoptosis; cancer; spinal muscular atrophy; diphtheria toxin receptor binding domain; DTR; neoplasm; tumour; hyper-proliferation; Alzheimer's disease; neurodegenerative disorder; transient ischaemic neuronal injury; stroke; spinal cord injury;
Inducing apoptosis in a cell infected with herpes simplex virus, HSV, by administering to the cell, a composition comprising an agent that inhibits phosphorylation of pro-apoptotic polypeptide BAD by HSV US3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

```
Novel fusion protein for modifying apoptosis in target cell and reducing apoptosis after transient ischaemic neuronal injury, has two domains which targets protein to a cell and modifies apoptotic response of cell
```

Claim 4; Page 59-61; 65pp; English

The sequence represents the amino acid sequence of Bad-DTTR apoptosismodifying fusion protein comprising Bad gene sequence fused via a short
linker to diphtheria toxin translocation domain (DTTR). The
functional apoptosis-modifying fusion protein is capable of binding a
c target cell and integrating into or crossing a cellular membrane of the
target cell. The apoptosis-modifying fusion protein comprises at least
two domains: the DTR domain, which targets the fusion protein to the
target cell. The BCI-XL domain, which modifies an apoptotic response
of the target cell. The fusion protein is useful for modifying
c finhibiting or enhancing) apoptosis in a target cell, such as neuron,
lymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or
hyper-proliferative cell or an adipocyte. It is also useful for reducing
apoptosis in a subject after transient ischaemic neuronal injury.
c apoptosis in a subject after transient ischaemic neuronal injury.
c specially spinal cord injury. The fusion protein may be used to treat
various diseases and injury conditions through inhibition or enhancement
of apoptotic cellular response, including neurodegenerative disorders
c such as Alzheimer's disease, including neurodegenerative disorders
c atrophy, stroke episodes and unregulated cell growth as in tumours and
various cancers. The apoptosis-modifying fusion protein can be delivered
effectively throughout the body and targeted to selective tissue and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A, Title: Cloning, primary structure, and regulation of the HIS7 gene encoding a bifun A, Reference number: A48651; MUID:93374850; PMID:8366040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Comment: This enzyme catalyzes the condensation of phosphoenolpyruvate and D-erythr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A; Description; aldehyde-lyase; carbon-carbon lyase
A; Pathway; aromatic amino acid biosynthesis; shikimate pathway
A; Note: first step in shikimate pathway
C; Superfamily; phospho-2-dehydro-3-deoxyheptonate aldolase
C; Keywords: aldehyde-lyase; aromatic amino acid biosynthesis; carbon-carbon lyase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó;

A) Title: Evidence for lateral gene transfer between Archaea and Bacteria from genome A) Reference number: A72200; MUID:99287316; PMID:10360571
A) Accession: F72289
A) Status: preliminary
A) Molecule type: DNA
A) Residues: 1-220 <ARN>
A) Residues: 1-220 <ARN>
A) Experimental source: SB:AE001772; GB:AE000512; NID:g4981693; PIDN:AAD36230.1; PID:g498

FEBS Lett. 390, 85-90, 1996 A;Title: Characterization of an Arabidopsis thaliana cDNA encoding an S-adenosylmethi A;Reference number: S71362; MJID:96314555; PMID:8706836
                                                                                                                                                                                                                                                            RiNelson, K.E.; Clayton, R.A.; Gill, S.R.; Gwinn, M.L.; Dodson, R.J.; Haft, D.H.; Hic Garrett, M.M.; Stewart, A.M.; Cotton, M.D.; Pratt, M.S.; Phillips, C.A.; Richardson,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Threonine synthase (EC 4.2.3.1) precursor - Arabidopsis thaliana

N.Alternate names: protein F27B13.80

C.Species: Arabidopsis thaliana (mouse-ear cress)

C.Date: 11-Jun-1999 #sequence_revision 11-Jun-1999 #text_change 03-Jun-2002

C.Accession: T08545. S71862; S74307

R.Bevan, M.; Zimmermann, W.; Grueneisen, A.; Wambutt, R.; Bancroft, I.; Mewes, H.W.;

Submitted to the Protein Sequence Database, May 1999

"Functional characterization of two splice variants of rat BAD and
their interaction with Bcl-w in sympathetic neurons.";

Mol. Cell. Neurosci. 17:97-106(2001).

L. Gell. Neurosci. 17:97-106(2001).

Mol. Cell. Serion serion of these proteins with BAX. Can reverse the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

C. SUBUNIT: Forms heterodimers with the anti-apoptotic proteins, Bcl-x(L), Bcl-2 and Bcl-w. Also binds protein slowalo. The Ser-137 phosphorylated form binds 14-3-3 proteins.

C. SUBCELLULAR LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /FITG=VSP_000534.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ISOId=035147-2; Sequence=VSP_000534;
TISSUE SPECIFICITY: Expressed in all tissues tested, including brain, liver, spleen and heart. In the brain, restricted to epithelial cells of the choroid plexus. Isoform alpha is the more abundant form.

DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.

PMM: Phosphorylated on Ser-113 in response to survival stimuli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Subsequent phosphorylation on Ser-137 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-156, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival. Ser-137 is the major site of ArX/PKB phosphorylation, Ser-156 the major site of protein kinase A (CAPK) phosphorylation (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (BY SIMILARITY).

SIMILARITY: Contains 1 Bcl-2 homology 3 (BH3) domain.

SIMILARITY: BELONGS TO THE BCL-2 FAMILY.

CAUTION: Ref.1 sequence differs from that shown due to frameshifts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            phosphorylation, locates to the cytoplasm.

TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES.

DOMAIN: Inteact BH3 domain is required by BHX, BID, BAK, BAD AND
BAX for their pro-appoptotic activity and for their interaction
with anti-apoptotic members of the Bcl-2 family.

PTM: Phosphorylated on Ser-75 in response to survival stimuli.
Subsequent phosphorylation on Ser-99 promotes heterodimerization
with 14-3-3 proteins. This interaction then facilitates the
phosphorylation at Ser-118, a site within the BH3 domain, leading
to the release of Bcl-x(L) and the promotion of cell survival
